The American Denial of Climate Warming

– *Dr. Naomi Oreskes*

To most, climate research is measurable, verifiable science. Yet, some equate it to socialism and tyranny. In her book, *Merchants of Doubt, How a Handful of Scientists Obscured the Truth on Issues from Tobacco to Global Warming*, science historian **Dr. Naomi Oreskes** finds herself at the center of the climate change debate arguing that some cynically try to confuse the discussion

by simply denying that the problem exists – just as they did with tobacco smoke, the ozone hole, and acid rain.

Dr. Oreskes became Professor of the History of Science and Affiliated Professor of Earth and Planetary Sciences at Harvard University in 2013 after 15 years at The University of California, San Diego.

Remodeled Home Tour Features 13 Area Homes See 13 Remodeling Projects over Two Days!

Thirteen homes throughout the Omaha Metro area will be showcased on the 9th Annual Omaha NARI (National Association of the Remodeling Industry) Remodeled Home Tour, presented by Omaha NARI and Metropolitan Utilities District. The tour will be Saturday, April 9h from Noon to 5 p.m.: and Sunday, April 10th from Noon to 5 p.m.

The Remodeled Home Tour features unique projects ranging from kitchen and master bath to whole house and lower level remodels. All homes are remodeled by Omaha NARI members who will be on hand to answer questions and offer home remodeling ideas.

Tickets to NARI's Remodeled Home Tour are \$10 per person and available at the door of each home on the tour. A portion of the proceeds benefits the Cystic Fibrosis Foundation. Tour details and a list of homes can also be found at <http://omahanari.org>.

Homes on tour in our area include:

Oldenhuis Contracting Inc	716 S. 96th Street	T. Hurt Construction	5512 Underwood Ave.
Sanwick Remodeling Contractors	410 S. 82nd Street	Sanwick Remodeling Contractors	410 S. 82nd St

Exhibit Shows Landmark Wins

Running now through June 12 at The Durham Museum is Saving Places: 50 years of Preservation Success Stories.

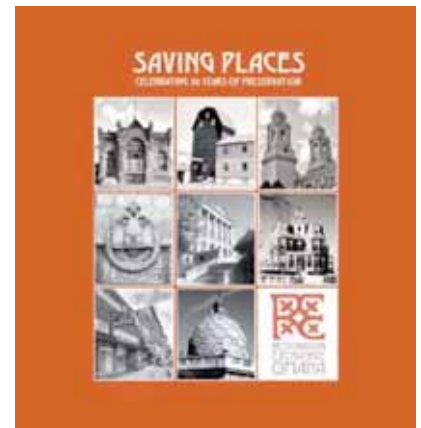

The Preservation movement turned 50 this year. In 1966 Congress passed the National Historic Preservation Act, leading to the formation of the National Trust for Historic Preservation organization.

But Omaha had a one-year head start. In 1965 our predecessor, Landmarks Inc., started an effort to save the old Post office at 16th and Dodge Streets. It was not successful, but the organization went on to save many of Omaha's architectural treasures, including the Kutak Rock Building and The Rose Theater.

To celebrate, Restoration Exchange has partnered with The Durham to present 50 years of preservation success stories.

Along with highlighting images of buildings saved and the history of the preservation movement in Omaha, we will bring in Jim Lindberg, senior director, Preservation Green Lab at National Trust for Historic Preservation. Lindberg will discuss preservation's tie to sustainability and urban renewal at an event on Tuesday, May 31. Omaha historian Joni Fogarty will speak June 7 on the work of architect Thomas Kimball.

Stay tuned for all of the details.

Increasing Omaha's Recycling

Omaha's waste and recycling programs have been in the spotlight lately as new proposals to reform the current collection methods draw public attention. These changes could not come sooner, with the current state of Omaha's recycling program lagging behind all neighboring states. A recent World-Herald analysis found that Nebraskans rank fifth in the country in the amount of garbage they send to landfills. Omaha has hovered around a diversion rate (% of total materials recycled) of 11% for many years, which is discouragingly low (the national average is 34%) and well below the EPA's estimate that 75% of residential trash is recyclable.

We can do better, and it is time for change at all levels of the system.

Waste Management recently submitted proposals to overhaul waste collection in Omaha. Mayor Jean Stothert requested these proposals to address "frequent complaints about the current level of service and plan for the future." However, overhauling Omaha's waste and recycling programs is a complicated matter, and the decision our leadership makes must carefully consider many alternatives and criteria.

Through my role as the Managing Partner of Verdis Group, a sustainability consulting firm here in Omaha, I see first hand the challenges and opportunities our clients have related to waste and recycling. The reality is that it is far more complicated than most people realize. Residences and businesses alike obtain, use, and need to discard many different types of materials, and most want a reliable, simple process.

In order to improve Omaha's recycling rate, there are a few key things that should be considered. First, start at the source. Omahans need to do a better job of considering what they are obtaining at the point of purchase. The best way to limit the volume of outgoing waste is to not obtain those materials in the first place. A major missing piece of both Waste Management proposals is any programming to decrease the amount of waste/recycling/yard waste that a resident produces. Less waste means less cost to taxpayers to manage the waste. MAPA's Integrated Solid Waste Management Plan (ISWMP) recommends the City hire or contract out a Source Reduction Specialist to do just this—reduce waste generation.

Yard waste in particular is a material that retains a great amount of value, and Omahans should be encouraged to consider ways to keep yard waste on their property. This can be done in the form of mulching grass clippings, composting leaves and grass clippings at home, and using some landscaping materials for other purposes (art, fencing, walking sticks, nature nooks, etc.). The City's own policy directs City staff to mulch leaves and grass clippings on City property. Shouldn't we do the same?

Next, the addition of larger, lidded recycling containers is good and important. Several studies have shown that such a system will result in higher recycling rates, which is something Omaha desperately needs.

Third, one of the more contentious issues in Waste Management's proposals relates to the plan to mix all landscaping materials with regular trash and send it all to the landfill, effectively shuttering the City's Oma-Gro composting operation. Claims have been made that sending landscaping materials to the landfill, which is where some electricity is generated by burning methane gas, is better environmentally than composting. These claims have not been peer-reviewed and the Nebraska Department of Environmental Quality, MAPA's ISWMP, and the Environmental Protection Agency share a common waste hierarchy wherein composting is a better use of organic waste than energy capture. The City does not have enough information to determine which approach is environmentally superior. Further analysis is warranted.

Finally, both Waste Management proposals effectively limit the amount of waste that a household can have picked up on a weekly basis. Such a limit is worthwhile, especially for regular landfill-bound trash, but there will have to be a strong communication and education campaign to help change how much waste Omahans generate. In one proposal option, residents are limited to five bags or cans (32-gallon maximum each) of trash and 4 bags or cans of yard waste for a total of nine containers and 288 gallons each week. This is the same as the current limit on trash containers, and it is too high. Frankly, residents should be pushed a bit to lower the amount of waste they send to the landfill.

In summary, there are some good aspects of the proposals, but there remain some significant questions that must be considered before moving forward. For example, how much sooner will our landfill close with the additional volume of yard waste? What will it cost taxpayers to build a new landfill further from the city? What is the environmental cost with longer driving distances?

I hope that the City invests time and money into gathering all the right information before making a decision on a such an important and complex issue.

Retirement transition series offered at Omaha Public Library

Are you retired, thinking about retiring soon, or simply ready to start planning for life after work? Join Omaha Public Library for a series of retirement transition workshops that will guide you in making the most of your retirement. Experts will be available to assist you in defining retirement goals, understanding Medicare options, exploring financial plans for security and more. All programs are free and open to the public, but space is limited. Register online at omahalibrary.org, or by calling the branch where you wish to attend.

Long-Term Care Planning: Learn about the options available for planning and paying for long-term care needs.

Social Security Strategies: Learn how to make the most of your Social Security decision and how to integrate with your other retirement income sources.

Medicare 101: Learn about the ins and outs of Medicare, and the important dates and options you need to consider.

Taxes in Retirement: Learn how taxes are different in retirement, and how to avoid pitfalls when harvesting income from various accounts.

Estate Planning: Learn about the different types of planning to help avoid headaches and unnecessary expenses later in life and upon death.

Visit omahalibrary.org for more information on these and additional events at Omaha Public Library's 12 locations.

Omaha Collects

General Crook House Guild

On Sunday afternoon, April 24 the General Crook House Guild will present the annual OMAHA COLLECTS event at the historic 1879 Victorian General Crook House Museum from 1 – 4 p.m. The museum is collected in Building 11 on the Fort Omaha Metro Community College campus. Signs will direct visitors.

Visitors will have the opportunity to view more than twenty displays of antique and vintage treasures and to talk to exhibitors. An antique sale will be held on the lower level.

Admission fees benefit the continued restoration and preservation of the museum.

The afternoon will include an outstanding exhibit of beaded Iroquois pin cushions and souvenirs items which was recently featured in a national magazine promoting antiques.

Also on display will be celery vases and celery dishes, amberina glass and French Baccarat Rose Tienta glassware, vintage crèches, match strikers, Shirley Temple memorabilia, cast iron door stops, and Little Golden books. Perhaps the largest items on display will be the fifteen vintage cars parked in front of the General Crook House at the beginning of the event. These cars belong to members of the Meadowlark Model A Club.

Please contact chair Maureen Maher at 402.556.4908 for more info or to exhibit a collection.

Eclectic Book Review Club Announces Spring Schedule

The Eclectic Book Review Club, which begin its series of continuous reviews in 1949, announces its spring schedule:

April 19 – Local author Rebecca Rotert will review her book, “Last Night at the Blue Angel.”

May 17 – Nationally-known speaker Joy Johnson will review her eighth book in The BOOB Girls series (The Burned Out Old Broads at Table 12). “Learning to Love Willie” is the new book.

Monthly meetings, which include lunch and a review, are held at 12 noon at the Omaha Field Club, 3615 Woolworth Avenue. The cost is \$13.00 per person.

For reservations, call Rita at 402-553-3147.

What's Your Carbon Footprint?

By David Holtzclaw of Transduction Technologies

This month, we celebrate Earth Day on April 22, 2016. Many Omahans feel that they need to reduce their carbon footprint, but they don't know how, or by how much, or even what their current carbon footprint is?

A carbon footprint is basically the amount of greenhouse gas (GHG) emissions by an individual, household, company, product, city, etc. over a defined period of time, usually one year. A greenhouse gas is any atmospheric gas that can trap heat in the atmosphere, warming up the Earth's surface. GHGs include water vapor, carbon dioxide (CO₂), methane (CH₄), nitrous oxide (NO_x), ozone, hydrofluorocarbons (HFC's), and many other carbon based gases. Although water vapor is by far the most abundant GHG, CO₂, the second largest GHG, has received the most attention due to its longer atmosphere residence time (30-95 years for CO₂ compare to approximately 9 days for H₂O or 12 years for CH₄) and unprecedented growth since the 1960's (https://upload.wikimedia.org/wikipedia/commons/1/1c/Carbon_Dioxide_400kyr.png). In 2008, James Hansen of NASA proposed that humanity should aim to keep global CO₂ concentrations below 350 ppm (parts per million, a pseudo measure of small concentrations), else "irreversible catastrophic effects" can occur (<http://arxiv.org/abs/0804.1126>). However, in 2015, average global CO₂ levels peaked at over 400 ppm compared to an average historic high of around 280 ppm.

The U.S. is the second-largest contributor of energy-related CO₂ emissions. The electric power and transportation sectors are the two largest sources of energy-related CO₂ emissions in the United States, accounting

for 38% and 34%, respectively, of total energy-related CO₂ emissions in 2014 (<http://www.eia.gov/environment/>). Depending on which study you reference, the average U.S. person contributes 19-48 tons of CO₂/year (yes, that was tons, as in 38,000-96,000 lbs/yr). The global average per person is 2-8 tons of CO₂/year. A 2013 study by Berkeley developed an averaged annual household carbon footprint by zip codes (<http://coolclimate.berkeley.edu/maps>). The average household CO₂ emissions for midtown zip code 68132 (2012 data) were 47.2 metric tons of CO₂ equivalent/year (13 for transportation, 17 for heating, 7 for food, 5 goods, and 5 for services). Why are we so high? First, we heat (primarily with natural gas) more than the U.S average, and second our electricity comes primarily for coal (48% in 2014) compared to the U.S average of 37%. OPPD produce 1.4 lbs of CO₂ per kWh of electricity generated (2015 average). Compare that to 1.22 lbs of CO₂ per kWh of natural gas burned (equals 11.7 lbs. CO₂/therm). Interested in determining your carbon footprint? Several online calculators exist <https://www3.epa.gov/carbon-footprint-calculator/>, or <http://coolclimate.berkeley.edu/calculator>. Start by getting a good estimate of your current carbon footprint, then make adjustments. Air travel, car fuel type and efficiency, electricity consumption, food selection, and services you use all have major impacts on your carbon footprint and are easy to reduce. Every pound counts!

The Christians—to April 17

Twenty years ago, Pastor Paul's church was nothing more than a modest storefront. Now he presides over a congregation of thousands, with classrooms for Sunday school, a coffee shop in the lobby, and a baptismal font as big as a swimming pool. Then Paul delivers a sermon about salvation that divides his congregation; those divisions play out in a series of intense conversations between the pastor, an associate pastor, a church elder, the pastor's wife and a congregant.

“The only way forward, if we are going to improve the quality of the environment, is to get everybody involved.”

— *Richard Rogers*

Holland Lecture Follow-Up Event

at First Unitarian Church

Climate Change and Religious values: Facing the Future

Tuesday, May 17 from 7:00-8:30pm;

Location: Sanctuary, First Unitarian Church, 3114 Harney

On May 11, 2016, distinguished Holland lecturer Naomi Oreskes will present “Denial: The Easy Answer to Global Warming.” In order to continue the conversation and to encourage action, a follow-up program hosted by Dr. Roger Bergman, director of Creighton University’s Justice and Peace Studies.

First Unitarian wants to open this conversation to increase understanding among people from all faith traditions about the need to address climate change with a change of heart.

The follow-up program will be focused on how we should respond ethically to what is known about climate change.

Please join us for this opportunity to share your concerns, questions, and insights about climate change, a global ethical concern critical to everyone’s future. Dr. Bergman will facilitate the conversation that emerges with the aim of discovering insights from diverse belief perspectives about this contemporary moral challenge.

First Unitarian Church of Omaha

3114 Harney Street All are welcome

20%**
on any purchase
of three bags or
more of spring
lawn products

- Step 1** All Seasons Lawn Food Plus Crabgrass and Weed Preventer – This product contains Barricade, absolutely the longest lasting weed preventer available. It prevents seeds of annual grassy weeds and many broadleaf weeds from germinating plus feeds your lawn with slow release nitrogen, iron, and micro nutrients.
- Step 2** Weed Free Zone® plus Lawn Fertilizer – Kills over 200 types of broadleaf weeds while feeding your lawn (18-0-6) including iron and micro nutrients.
- Step 3** Kill A Grub – Controls the larvae of many insects that damage lawns. This unique product causes the larvae to stop feeding without harming earthworms or birds. It has won a special environmental award from the EPA.

April Special **Plant Permanent Color This Spring!**
